# SmartSourcing

## Smartsourcing for your Projects

Smartsourcing by Quidgest is an advanced concept for the contracting of your project resources that competes directly with the traditional IT Outsourcing services.

Through this concept, you will be able to access specialist consultants for rapid application development, based on the Genio development platform technology.

### How does it work?

By contracting through smartsourcing, you are not only hiring the manpower resources for your projects, you will have immediate access to development services using the Genio technology.

Not only do our consultants and developers draw from their vast experience in the requested technology areas, but also within their respective vertical business areas. In addition, they use Genio technology to accelerate the development process of your project.

Quidgest offers smartsourcing services in the context of development of additional modules and/or entire management systems solutions, but not as traditional developers for partial coding of project tasks.

### Smartsourcing is about your project team being more agile, faster and leaner.

When using Quidgest Smartsourcing specialists, you can expect to require far less resources than through traditional development processes.

This is because when using Genio for rapid application development, the process is expected to be ten times faster than with traditional processes – and with only one-tenth of the manpower. Using Genio, the development process is model-based, i.e. the focus is on the model of the software application rather than on the coding itself, as the platform will generate 98% of the program code automatically.

Hence, the better you design your model, the higher the quality and the faster your complex application can be developed.

## Smart Nearshoring

### Use our entire team

Are you accustomed to allocating portions or entire projects to your nearshoring partner for system development?

Quidgest specializes in rapid application development of complex management information systems. With headquarters based in Lisbon, Portugal, Quidgest employs more than 90 specialists from 14 nations work on projects for customers across the globe. We are international and innovative and speak your language.

With uncomplicated yet efficient management structures and excellent skill-sets in more than ten vertical business areas, we are able to deliver information systems ten times faster to highest quality standards— as a virtual team, on location or in a mixed matrix organization.

### Accelerate your projects with Genio technology

Rapid application development has been performing successfully by the Quidgest team for years, using the Genio development platform. With model-based rapid application development combined with automatic code generation into more than 10 programming languages and technologies, including web, client/server and mobile, Quidgest is uniquely positioned as your partner to deliver a **smarter Nearshoring**, the development of complex information systems 10 times faster than by traditional programming processes – and with only 1/10 of the usually required workforce.

Using Genio, the development process is model-based, i.e. the focus is on the model of the software application rather than on the coding itself, as the platform will generate 98% of the program code automatically. This makes us fast, flexible and capable to deliver.

The better we, as your partners, design your model, the higher the quality, the faster your complex application is developed. Used by our team to optimal extent, the innovation power

### Free up your resources, do more and faster

“This allows you to plan your own resources in a completely different way, enabling you to work on more projects with the same team, and in less time, and with a very high standard of quality.”

and continuous evolution of the Genio platform can help you secure and maintain competitive advantage and add value.

The team at Quidgest has implemented more than 200 complex information systems around the globe, from management of national parliaments, financial management of public services, balanced scorecard for the strategic management of governing bodies, to human resources management as shared services, management solutions of subsystems in the healthcare sector, or complete hospital management systems. In addition, included are our training and maintenance scheduling solution for the aviation industry, portals in various technologies, and document and business process management solutions.
