

Quidgest

Integrated Management of Higher Education

Integrate and streamline the management of educational institutions

In a society increasingly competitive, marked by flexibility and quality of information, universities require competent administration, dedicated to improving the quality of their services.

Information systems are a key organizational resource in the management of these institutions. Indeed, the systems enable greater sharing of information between students, teachers, employees and the academic community; in addition to their essential role in strategic decision making.

To meet these challenges, Quidgest has developed an integrated academic management system: a solution that enables the management and control of the processes of schools, academic institutions and universities.

Thanks to Genio, the platform Quidgest automatic code generation, academic management system is a solution that can easily adapt to each institution and continually evolve over time thanks to the inclusion of new features, satisfying all academic procedures.

Benefits

Quality

The Quidgest academic management system guaranteed a quality service to students, teachers and the entire university community. With better management, the institutions can ensure the achievement of quality standards and a better positioning in international rankings.

Economy

The integration between systems that manage teaching process, particularly in finance and documents allows one hand, a greater control of income, and secondly, better management of information. The creation of a digital desk brings together in a single platform, different profiles, levels of access and service automation, leading to time savings and cost reduction.

Productivity

Thanks to the academic management system, the organization obtains performance indicators from different processes, better communication between different departments and, therefore, better strategic alignment between the administration, teachers and students.

Expansion

The system allows the expansion of the organization, especially regarding the location, size and / or rotation of the agents that are part of the university community. On the other hand, it is possible to detail other sources of income from the promotion and distribution of books, studies and research projects.

Agility

The system can respond faster to educational institutions, program changes, educational processes, legislative changes or to technological innovations.

Confidence

Transparency in the management of processes allows greater credibility in the organization of teaching and therefore to the public in general.

- Viewing the history on the student's payments (tuition fees) and their current status (resolved, unresolved or pending);
- Management curriculum, school units and student assessments (type of evaluation, periods, observations);
- Document management applications requisitioned by the student (certificates, diploma or other) and date of delivery.

Teacher Sheet

- Creation of the teacher's presentation and recording of personal data (name, sex, date of birth), identification (identity card number) and professional data (category, qualifications, department);
- Ability to attach their CV in .doc or .pdf format;
- Registration materials which the teacher is associated, as well as courses, number of hours, evaluations and research projects;
- Saving the class type (theoretical, laboratory, other) language, course number, attendance and summary.

Curriculum Management

- Management of all courses: Registration, classes, absences, attendance lists, evaluation and documentation;
- Management of logistics operations related to curriculum: rooms available and requisition necessary equipment.

System Features

Student Sheet

- Creation of the student's record and recording of personal data (name, sex, date of birth), identification (identity card number) and Student Data (student number and email institutional);
- Plan registration in which the student is enrolled (day or night) and schedules of academic units;

Employee record

- Creating a profile for the employee and registration of personal data (name, sex, date of birth), identification (identity card number) and business data (qualifications, institutional email, phone, etc.);
- Ability to attach your CV in .doc or .pdf format;
- Registration of research projects in which the employee is associated.

Applications Management

- Management of requests made via the student portal and definition of each stage of the application (validated, non-validated, registered or unregistered).

Payment management

- Management of payments associated with the beginning of the school year, including tuition and requests for documents.

Other features of the system

- Changing messages and notifications available in the platform;
- Management seminars entries;
- Books requisition Management (date of application, delivery dates, etc.).

Student Portal

Thanks to the student portal, students have the opportunity to access various menus and services, particularly regarding posts, projects, activities, documents, payments, requisitions to the library, between other features.

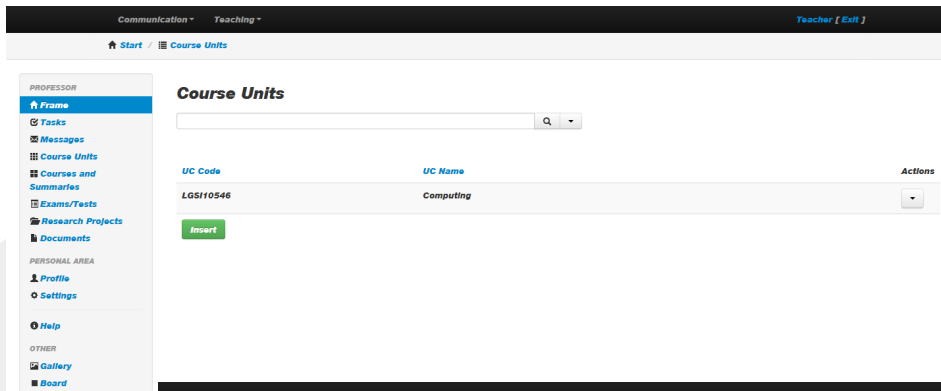

The access platform also allows the student to modify its personal data and change their password to access the portal.

Teacher Portal

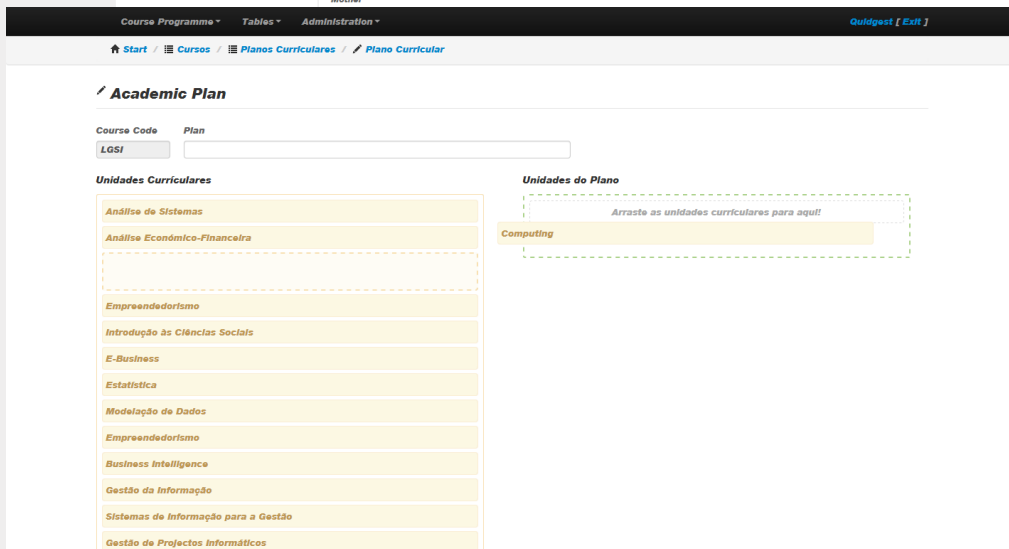

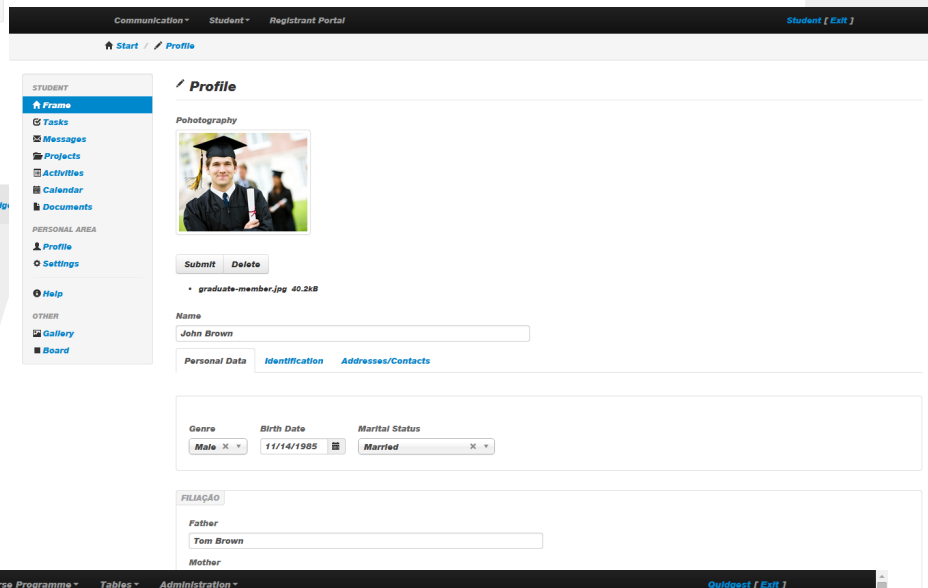

The teacher's portal used to manage all academic proceedings, as well as classes, examinations, research projects, among others.

The management of all the information in the education profile and messages and documents can also be processed by the portal.
